

# HYDRONYLON®

## WATERPROOFING MEMBRANE FOR ROOF RENOVATION

### ROOFING SYSTEM

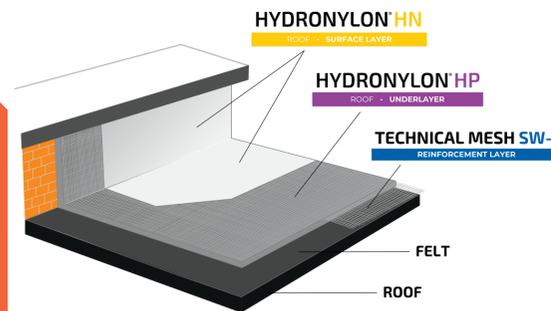

HYDRONYLON® is designed for creating waterproof, coating roof coverings. It is applied in a liquid form on substrates such as bituminous felt, metal, and mineral materials. HYDRONYLON® is an ideal solution for large-scale industrial and commercial buildings as well as residential ones.

### OUR SOLUTIONS

We offer a modern solution for renovating, sealing, and maintaining existing roof coverings. Our product is easy to apply, eliminating the need to remove and dispose of old roof layers, and provides effective, long-term protection. It stands up to large temperature fluctuations and UV radiation. The application can be done with a brush, roller, or by spraying. Once dried, it forms a uniform, permanently elastic, moisture-resistant coating. This is perfect for protecting roofs with complex shapes. It boasts excellent adhesion to repaired substrates, high elasticity, shape memory, and waterproofing capabilities. Our product doesn't require the use of open flame and is characterised by a low content of volatile organic compounds, making it a safer, more environmentally conscious choice.

### WHAT IS THE APPLICATION OF THE HYDRONYLON® SET?

- ✓ applying waterproofing membranes
- ✓ roof maintenance
- ✓ improving roof's appearance
- ✓ localised waterproofing esp. around chimneys, vents, partition walls, parapets or outlets
- ✓ creating a cool roof effect
- ✓ creating a new protective surface

### NEED A ROOF REPAIR? WITH US, YOU WILL GAIN:

- ☂ 100% roof tightness
- 🛠 no maintenance costs
- ⚡ reduced air conditioning usage
- 📅 durability for years
- 🔧 a seamless and joint-free coating
